The use of red blood cell survival as a toxicity index has been assessed for vinyl chloride (VC) using male and female F344/N rats given single intratracheal doses of VC in concentrations of 100, 300, and 1000 mg/kg, and recovery of 24-hr survivors was monitored over the next 12 weeks. Intratracheal VC did not cause anemia in male or female rats given doses of 100 mg/kg or higher. A dose-related decrease in mean red blood cell survival was evident in males given doses of 300 mg/kg VC or higher, and in females given doses of 1000 mg/kg VC or higher. In the absence of overt toxicity, mean red blood cell survival decreased with increasing dose of VC in a dose-dependent manner in both sexes. At doses of 300 or 1000 mg/kg, red blood cell survival was decreased to approximately 60 and 75% of control values, respectively, in both sexes. This indicates that red blood cell survival can be used to assess the toxicity of VC in rats given doses that cause overt toxicity.Q: PHP MySql Multiple Select Query I have a problem in MySql query i am trying to fetch data in an existing table but problem with this query is it is returning all data which i dont want it to return all the data Here is the code 82157476af
